EDUCATION

University of Michigan

B.S.E, Computer Science

Graduating May 2026

Ann Arbor, MI

GPA: 4.00/4.00 | **Activities:** V1 @ Michigan, UM Autonomous Robotic Vehicle

Coursework: Data Structures & Algorithms, Data Driven Systems, Theory of Computation, Discrete Math, Linear Algebra

Professional Development: Susquehanna International Group, LLP (SIG) Discovery Day - Technology

TECHNICAL SKILLS

Languages: Python, C++, Go, Typescript, Rust

Technologies: Git, Linux, Docker, Django, Flask, NextJS, Terraform, Postman, MySQL, MongoDB, Makefile

EXPERIENCE

Vectra AI

Incoming Software Engineer Intern

May 2024 – August 2024

Austin, TX

CriTech Research

Software Engineer Intern

May 2023 – August 2023

Saline, MI

- Engineered a **Python Flask** API to receive and process ECG scans, generating PDF reports and compliance data for seamless viewing by medical professionals and patients.
- Optimized API reliability by adding 100% coverage tests (unit, integration, blackbox) to a CI pipeline, saving ~2 hours of manual testing weekly and providing high availability.
- Collaborated with Senior Engineers to migrate backend infrastructure to **Azure** App Services, Blob Storage, and MySQL Database using **Terraform**, cutting service costs by \$50k/year.

EXTRACURRICULARS

UM Autonomous Robotic Vehicle

Software Engineer - Sensors

September 2023 – Present

Ann Arbor, MI

- Deployed temporal, jitter, and transformative filters for an IMU sensor in **C++** and **Python** to clean inputs for a SLAM (simultaneous location and mapping) algorithm, reducing noisy data by 40%.
- Implemented a robust **Python** logging system using Pub/Sub architecture to monitor robot metrics in real-time and alert engineers of potential errors, resulting in a diagnosis of malfunctioning sensors.
- Led architectural design reviews and communicated decisions with other teams to ensure system reliability.

V1 Michigan

Platform Engineer

January 2024 – Present

Ann Arbor, MI

- Designed and wrote a club member-to-alumni connection request feature using **NextJS** and **AWS** Simple Email Service. Persisted connection status data in Supabase using the **Typescript** ORM.
- Held weekly design meetings with members to gather feedback and iteratively refine the project.

PROJECTS

quarry.video | *NextJS, Python, Django, Go, Terraform, MongoDB* | [Visit](#)

- Architected an interface for AI shortform content generation with **NextJS**. Leveraged **Python** to build an FFmpeg wrapper for the video processing pipeline. Frequently met with users to gain input and iterate.
- Authored and deployed a centralized logging service using **Go**, allowing the team to find and track anomalies.

Beehive | *C++, FFmpeg, Multithreading* | [GitHub](#)

- Engineered a cross-platform screen recording and streaming tool using **C++**, leveraging FFmpeg to encode and push video to an RTMP server in real-time (60+ frames per second) or write to disk in multiple formats.

Embedchain | *Python, ChromaDB, PyTest* | [GitHub](#)

- Shipped **Python** features to create and reset multiple AI “brains” using **ChromaDB** collections. Integrated extensive unit and end-to-end tests with **PyTest** for each feature. Iteratively improved code through maintainer feedback.
