## EDUCATION

### University of Michigan, Ann Arbor

*B.S.E, Computer Science*

**GPA:** 4.00/4.00 | **Activities:** V1, UM Autonomous Robotic Vehicle

**Coursework:** Data Structures & Algorithms, Data Driven Systems, Analysis of Algorithms, Discrete Math, Linear Algebra

August 2022 - May 2026

## SKILLS

**Languages:** Python, Go, C++, TypeScript, JavaScript, SQL

**Technologies:** Linux, Git, Docker, Terraform, Kubernetes, FFmpeg, Django, Flask, NextJS, GraphQL

**Databases:** PostgreSQL, Redis, MariaDB, DynamoDB, MongoDB

## EXPERIENCE

### Courier Health

*Software Engineer Intern - ETL Pipeline*

September 2024 – Present

*New York City, NY*

- Implement batching and parallelization for the data ingestion pipeline by chaining AWS Lambda calls in topological order, reducing error/timeout rate to  $< 0.1\%$  and reducing PostgreSQL IO spikes.
- Engineer a metrics system using TypeScript, tracking completion time, success rate, data integrity, etc. of the pipeline in PostgreSQL and write 100% coverage Jest tests to ensure reliability.
- Deploy a GraphQL API as an AWS Lambda for metrics retrieval and visualize using React, providing critical pipeline observability and diagnostics, bringing failure investigation time from 10+ minutes down to  $< 60$  seconds.

### Vectra AI

*Software Engineer Intern - Detections Infrastructure*

May 2024 – August 2024

*Austin, TX*

- Piloted scalable event-driven architecture for high workload tasks with Python and Celery, cutting AWS costs by 25%, halving CPU and memory allocation, and eliminating the need for 13 Kubernetes cronjob deployments.
- Minimized concurrent Celery broker and backend connections by optimizing pool sizes, lowering memory footprint by 34% for Redis, 10% for MariaDB, and driving down cloud compute costs.
- Leveraged Terraform to orchestrate S3 Access Point integrations and visualized time-series bucket usage data through Grafana, providing process-level cost observability and identifying areas for expense reduction.

### CriTech Research

*Software Engineer Intern - Analytics Backend*

May 2023 – August 2023

*Saline, MI*

- Shipped redesigned endpoints for a medical patient portal using C# and .NET Core, removing unnecessary MySQL queries and accommodating a 10% growth in compliance data requests.
- Optimized API reliability by adding 100% coverage tests (unit, integration, blackbox) to a CI pipeline, saving  $\sim 2$  hours of manual testing weekly and providing high service availability.
- Collaborated with Senior Engineers to migrate backend infrastructure to Azure App Services, Blob Storage, and MySQL Database using Terraform, cutting hosting costs significantly and improving app uptime to 99.999%.

## PROJECTS

### Distributed Filesystem | *Go, Networking, Concurrency, Read-write locks* | [GitHub](#)

- Built a distributed concurrent network filesystem, utilizing read-write locks for maximum efficiency, RPC calls to enable network communication with clients, and UDP sockets for automatic discovery.

### Beehive | *C++, FFmpeg, Multithreading* | [Source Code](#)

- Engineered a cross-platform screen recording and streaming tool using C++, leveraging FFmpeg to encode and push video to an RTSP server in real-time (60+ frames per second) or write to disk in multiple formats.

### quarry.video | *NextJS, Python, Django, Go, Terraform, MongoDB* | [Visit](#)

- Architected a full-stack app with NextJS, MongoDB, and Prisma, providing a robust in-browser interface for short-form content generation, video editing, and data visualization.
- Leveraged Python to build a reliable FFmpeg wrapper for the video processing pipeline, built with Django.
- Authored and deployed a centralized logging service using Go, allowing the team to find and track anomalies.
